

20 W Power Resistor, Thick Film Technology, TO-220

FEATURES

- 20 W at 25 °C heatsink mounted
- High power dissipation to size ratio
- Wide resistance range from 0.01 Ω to 550 k Ω
- Negligible inductance
- Easy mounting
- TO-220 package: compact and easy to mount
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

Available

The well known TO-220 package is compact and easy to mount.

Two versions of this thick film resistor are available:

- A radial leaded version for PCB mounting
- A flat lead version for surface mounting

DIMENSIONS in millimeters

Note

- Tolerances unless stated: ± 0.4 mm

MECHANICAL SPECIFICATIONS

Mechanical Protection	Insulated case
Resistive Element	Thick film
Substrate	Alumina onto base of nickel coated copper
Connections	Tinned copper
Weight	2.2 g max.

ENVIRONMENTAL SPECIFICATIONS

Temperature Range	-55 °C to 155 °C
Climatic Category	55 / 155 / 56
Sealing	Sealed container, solder immersion
Flammability	IEC 60695-11-5 2 applications 30 s separated by 60 s

Note

- Not compatible with RoHS reflow profile

CHOICE OF THE HEATSINK

The user must choose the board according to the working conditions of the component (power, room temperature). Maximum working temperature must not exceed 155 °C. The dissipated power is simply calculated by the following ratio:

$$P = \frac{\Delta T}{R_{TH(j-c)} + R_{TH(c-h)} + R_{TH(h-a)}} \quad (1)$$

P: Expressed in W

ΔT : Difference between maximum working temperature and room temperature

$R_{TH(j-c)}$: Thermal resistance value measured between resistive layer and outer side of the resistor. It is the thermal resistance of the component: Special Features table.

$R_{TH(c-h)}$: Thermal resistance value measured between outer side of the resistor and upper side of the heatsink. This is the thermal resistance of the interface (grease, thermal pad), and the quality of the fastening device.

$R_{th(h-a)}$: Thermal resistance of the heatsink.

Example:

$R_{TH(c-a)}$ for RTO 20 power rating 10 W at ambient temperature +25 °C

Thermal resistance $R_{TH(j-c)}$: 6.5 °C/W

Considering equation (1) we have:

$$\Delta T = 155 \text{ }^\circ\text{C} - 25 \text{ }^\circ\text{C} = 130 \text{ }^\circ\text{C}$$

$$R_{TH(j-c)} + R_{TH(c-h)} + R_{TH(h-a)} = \frac{\Delta T}{P} = \frac{130}{10} = 13 \text{ }^\circ\text{C/W}$$

$$R_{TH(c-h)} + R_{TH(h-a)} = 13 \text{ }^\circ\text{C/W} - 6.5 \text{ }^\circ\text{C/W} = 6.5 \text{ }^\circ\text{C/W}$$

OVERLOADS

In any case the applied voltage must be lower than the maximum overload voltage of 750 V.

The values indicated on the graph below are applicable to resistors in air or mounted onto a heatsink.

MARKING

POWER CURVE

POWER RATING

The temperature of the heatsink should be maintained within the limits specified.

To improve the thermal conductivity, surfaces in contact should be coated with a silicone grease and the torque applied on the screw for tightening should be around 1 Nm. Spring clip can also be used to mount the component on an heatsink (ex: Kunze, clip KU4-498).
